Story Title *

HC-311 — Automated Insurance Pre-Authorization for Radiology Tests

Description

Description:
Before scheduling any CT, MRI, or ultrasound procedure, the system should trigger an API call to the insurance provider to check if the procedure is covered under the patient's plan. If authorization is required, it should initiate the pre-authorization process automatically and store the approval ID in the patient record.

Epic:

Financial & Billing Workflows - Insurance Automation

Acceptance Criteria *

Given a test is not covered.
When the result is received,
Then the system should notify both the coordinator and patient, and offer alternative payment options.

Additional Info

Priority: P1
Risk: Medium
Status: In Progress

10 test case(s) generated • Model: openai/gpt-oss-120b • Tokens: 2232

Test Case ID	Title	Category	Expected Result
TC-001	Verify insurance eligibility for a covered CT scan	Positive	System calls insurance eligibility API, receives "covered" response, and allows scheduling to proceed without errors.
Test Steps for TC-001			
STEP ID	STEP DESCRIPTION	TEST DATA	EXPECTED RESULT
501	Log in as billing coordinator	Patient ID: 12345, Procedure: CT Head, Insurance Plan: XYZ-Standard	Step completed successfully
502	Select patient with active insurance	Patient ID: 12345, Procedure: CT Head, Insurance Plan: XYZ-Standard	Step completed successfully
503	Choose a CT scan procedure	Patient ID: 12345, Procedure: CT Head, Insurance Plan: XYZ-Standard	Step completed successfully
504	Click "Schedule Test" button	Patient ID: 12345, Procedure: CT Head, Insurance Plan: XYZ-Standard	System calls insurance eligibility API, receives "covered" response, and allows scheduling to proceed without errors.
TC-002	Automatic pre-authorization for a procedure requiring approval (MRI)	Positive	System receives authorization ID and approval date from API, stores them in the billing record, and displays a success message.
TC-003	Handle insurance API timeout error	Negative	System shows an error message "Unable to verify insurance at this time", does not create a scheduled test, and logs the timeout event.
TC-004	Notify coordinator and patient when test is not covered	Negative	System receives "not covered" response, sends notification email to coordinator and SMS to patient, and displays alternative payment options.
TC-005	Select primary insurance when patient has multiple policies	Edge	System uses primary insurance (PlanA) for eligibility check, receives appropriate response, and proceeds accordingly.
TC-006	Handle invalid patient identifier	Edge	System displays validation error "Invalid patient identifier" and prevents API call.
TC-007	Restrict scheduling to authorized roles	Authorization	System shows authorization error "You do not have permission to schedule tests" and disables the button.
TC-008	Verify insurance API response latency under 2 seconds	Non-Functional	System receives eligibility response within 2 seconds and proceeds without timeout errors.

Description

Generated Test Cases

10 test case(s) generated • Model: openai/gpt-oss-120b • Tokens: 1699

Test Case ID	Title	Category	Expected Result
TC-001	Display list of inpatients for authorized consultant	Positive	A table/grid showing all inpatients assigned to the consultant with correct patient name, ID, admission date, and status
TC-002	Filter inpatients by admission date range	Positive	Only inpatients admitted between 2024-01-01 and 2024-01-31 are displayed
TC-003	Sort inpatients by patient name ascending	Positive	Inpatient list is sorted alphabetically A-Z by patient name
TC-004	Attempt to access My Inpatients without authentication	Authorization	User is redirected to the login page with a message indicating authentication is required
TC-005	Consultant role cannot view other consultants' inpatients	Authorization	System ignores the query parameter and continues to show only Consultant A's inpatients; no data leakage occurs
TC-006	Invalid date filter input shows validation error	Negative	An inline validation message appears indicating the date is invalid and the filter is not applied
TC-007	No inpatients assigned to consultant displays empty state	Edge	A friendly empty state message is shown (e.g., "You have no inpatients currently") and no table rows are rendered
TC-008	System handles maximum number of inpatients without performance degradation	Non-Functional	The page loads and renders the list within 3 seconds; pagination or virtual scrolling works correctly
TC-009	Responsive layout adjusts for mobile screen	Non-Functional	The inpatient list adapts to a single-column layout or collapsible cards, all controls remain usable without horizontal scrolling
TC-010	Export inpatients list to CSV	Positive	A CSV file is downloaded containing all visible inpatient records with correct headers and data matching the UI

Feature: Consultant Dashboard - My Inpatients

As a consultant,
I want to view and manage my inpatients on the dashboard
So that I can quickly access patient information and take appropriate actions.

Background:
  Given a consultant user is authenticated
  And the consultant has the role "Consultant"

#Positive
Scenario: View list of assigned inpatients
  When the consultant navigates to the "My Inpatients" dashboard
  Then the system displays a list of inpatients assigned to the consultant
  And each inpatient entry shows the patient name, ID, ward, and admission date

#Negative
Scenario: No inpatients assigned to consultant
  Given the consultant has no inpatients assigned
  When the consultant navigates to the "My Inpatients" dashboard
  Then the system displays a message "No inpatients assigned"
  And no patient rows are shown in the list

#Edge
Scenario: Filter inpatients by ward and admission date
  Given the consultant has inpatients in multiple wards
  When the consultant applies a filter for ward "Cardiology"
  And the consultant applies a filter for admission date from "2024-01-01" to "2024-01-31"
  Then the list shows only inpatients matching the selected ward and date range
  And the total count reflects the filtered results

#Negative
Scenario: Unauthorized user attempts to access the dashboard
  Given a user without the "Consultant" role is authenticated
  When the user attempts to navigate to the "My Inpatients" dashboard
  Then the system denies access with a message "Access denied"
  And the user is redirected to the login page

#Edge
Scenario: Pagination with a large number of inpatients
  Given the consultant has more than 50 inpatients assigned
  When the consultant navigates to the "My Inpatients" dashboard
  Then the system displays the first 20 inpatients in the list
  And pagination controls are visible
  When the consultant selects the next page
  Then the system displays the next set of 20 inpatients

#Outline
Scenario Outline: Search inpatient by patient ID
  When the consultant enters patient ID "<PatientID>" in the search box
```
